

### Claims

1. A cover for an electronic device comprising:  
a flexible sleeve, said sleeve having an opening in at least one end thereof;  
a means for applying said flexible sleeve onto said electronic device.
2. The cover for an electronic device as recited in claim 1 wherein said sleeve is comprised of plastic.
3. The cover for an electronic device as recited in claim 1 wherein said sleeve is transparent.
4. The cover for an electronic device as recited in claim 1 wherein said means for applying said flexible sleeve onto said electronic device is comprised of an open tubular member wherein a first end of said open tubular member is attached to said opening in said sleeve and a second end of said open tubular member is adapted to receive said electronic device.
5. The cover for an electronic device as recited in claim 4 wherein said means for applying said flexible sleeve onto said electronic device is comprised of a material selected from the group consisting of paper, cardboard, plastic and metal.
6. The cover for an electronic device as recited in claim 1 wherein said means for applying said flexible sleeve onto said electronic device is releasably attached to said opening.
7. The cover for an electronic device as recited in claim 1 wherein said applicator means is permanently attached to said opening.

8. A cover for enveloping a hand-held electronic device, said cover comprising:
  - a flexible sleeve comprised of a top wall, a bottom wall, two side walls connecting said top wall and said bottom wall, a rear wall connecting said top wall, said bottom wall and said two side walls at a first end of said sleeve;
  - a sleeve opening defined by said top wall, said bottom wall and said two side walls at a second end of said sleeve; and
  - an applicator secured to said sleeve opening, said applicator comprising a tubular member having a first opening and a second opening wherein said first opening is secured to sleeve opening and said second opening is adapted to receive said hand-held electronic device.
9. The cover for enveloping a hand-held electronic device as recited in claim 8 wherein said flexible sleeve is comprised of plastic.
10. The cover for enveloping a hand-held electronic device as recited in claim 8 wherein said flexible sleeve is transparent.
11. The cover for enveloping a hand-held electronic device as recited in claim 8 wherein said sleeve opening further comprises a pressure sensitive adhesive on an inner periphery of said sleeve opening.
12. The cover for enveloping a hand-held electronic device as recited in claim 8 wherein said applicator further comprises a pressure sensitive adhesive on an outer periphery of an end of said applicator proximate to said first opening.
13. The cover for enveloping a hand-held electronic device as recited in claim 8 wherein said applicator is releasably secured to said sleeve opening.

14. The cover for enveloping a hand-held electronic device as recited in claim 8 wherein said applicator is permanently secured to said sleeve opening.
15. The cover for enveloping a hand-held electronic device as recited in claim 8 wherein said applicator is comprised of cardboard.
16. The cover for enveloping a hand-held electronic device as recited in claim 15 wherein said cardboard applicator further comprises a living hinge on opposite sides of said applicator.
17. The cover for enveloping a hand-held electronic device as recited in claim 15 wherein said cardboard applicator is scored on opposite sides of said applicator.
18. The cover for enveloping a hand-held electronic device as recited in claim 15 wherein said cardboard applicator is folded on opposite sides of said applicator.
19. The cover for enveloping a hand-held electronic device as recited in claim 8 wherein said applicator is comprised of a material selected from the group consisting of paper, cardboard, plastic and metal.
20. A method for covering a hand-held electronic device, said method comprising:  
providing a flexible sleeve for covering said hand-held electronic device, said flexible sleeve having an opening in at least one end thereof;  
providing a tubular applicator for securing to said opening of said flexible sleeve;  
placing said hand-held electronic device within said tubular applicator; and  
pulling said tubular applicator and said flexible sleeve along said hand-held electronic device until said flexible sleeve covers at least a portion of said hand-held electronic device.
